

System Inventory Project – Crews in your area during 2019

As part of the PUD's reliability and outage management initiatives, we have hired Davey Resource Group (DRG) to take record of all our equipment county wide.

What does this mean for you? You may notice DRG technicians in your area, taking photos of our lines, substations, poles, meters, transformers and other PUD equipment. These technicians will have PUD issued contractor badges and a PUD contractor logo on their vehicle. However, if you are ever unsure of who someone is, never hesitate to give us a call.

How long will this last? Since the project is county wide, it is projected to wrap up towards the end of 2019.

When will they be in your area? We will do our best to notify all customers via automated phone call, text and email the week before crews reach your region. To ensure you receive the notification, make sure your contact information is updated in our system by calling 509-447-3137.
